## Education

California State University San Marcos

May 2026

Bachelor of Science in Computer Science , Minor in Mathematics

ABET Accredited

## Experience

Interim Network Technician | Escondido Union High School District

MAR '25 – Present

independently provide technical support for users, systems, and infrastructure at EUHSD's Adult School during a hiring transition. I maintain and troubleshoot Cisco networking equipment, specifically Meraki devices, supporting connectivity, basic switch configuration, and device integration into the network. I also oversee hardware transitions and play an active role in evaluating, selecting, and purchasing IT equipment in alignment with district standards. On a daily basis, I deliver hands-on support for desktop hardware, printers, and software applications. Additionally, I educate students and staff on security practices and application-specific tools to promote safe and effective technology use.

Resource Specialist | City of Oceanside

AUG '23 – AUG '25

Entrusted to identify and implement solutions to chronic instability in the region. Collaborated with agencies to bring in ongoing programs, such as managing interns and adapting computing classes for drop-in tech help. Fostered community through events and a shared garden. Provided one-on-one support in areas like advocacy, temporary housing, and Section 8 assistance.

Tech Specialist / Laborer | Atmos Design Build

MAR '23 – Present

Implemented home renovation solutions during residential projects. Assisted with framing, drywall installation, flooring, painting, and fixture mounting to enhance both functionality and aesthetics. Integrated smart home features such as lighting, thermostats, and security systems during remodeling. Provided hands-on support for troubleshooting construction-related issues, ensuring quality workmanship and timely completion. Advised clients on material selection and layout improvements to increase efficiency, comfort, and property value. Conducted routine maintenance and repairs, ensuring long-term durability and performance. Collaborated closely with other trades during ongoing renovations to maintain smooth project flow and accurate installations.

Software Development Intern | Hunter Industries

MAY – AUG '23

Created an Angular components that addressed client concerns regarding inadequate access to information that was available on a secondary platform but not the web-based application. Successfully integrated the component into the code base and created a variety of tests to ensure component security and experience was up to company standards. As of Dec. 23, in use.

Student Specialist | CSUSM LatinX Center and CSUSM Library Special Collections

NOV '22 – MAY '23

Prepared and presented Infographics, using Excel, Python, and database system For the director and the university president. Utilized available software applications to manage various initiatives that would increase the ease of data collection, improved survey responses, event management.

## Projects

The PIT

Ongoing

- Created a full NAS and remote workstation environment, using recycled laptop hardware and Unraid on Linux eliminating reliance on paid cloud services through open-source infrastructure.
- Extended the server to host a remote Revit instance, enabling full BIM workflows to be accessed remotely.

Airstream Retrofit

Ongoing

- Retrofitted an Airstream trailer with a roof-mounted Starlink terminal, allowing internet access from remote locations
- Engineered a Raspberry Pi-based automation system in Python to enable remote control alongside live and friendly readouts of HVAC and lighting, temperature, waste, water, and power

## Relevant Skills

Programming Languages: Python, C++, SQL, javascript, typescript, fortran, etc.

Software & Tools: Matlab, Rstudio, Angular, Flask, oracle dbms, wireshark, MongoDB

## Special Requirements

---

**Question 1.** Complex Datasets, SQL/Excel, and Management Reporting In my role as a Cultura Educator at the CSUSM LatinX Center, I worked directly with data collection and reporting for university leadership. I used Excel and Python to manage, clean, and analyze survey and participation data, identifying gaps in program engagement and inconsistencies in responses. I prepared infographics and data summaries that were presented directly to the director and the university president to support decisions around resource allocation and program effectiveness. In my Special Collections Assistant role, I built a custom C++ and Python program integrated with Excel to process and validate large volumes of archival metadata. This required identifying inconsistencies across records at scale — work that would have been impractical to perform manually — and producing clean, accurate outputs for the library's collections system. My coursework in Database Systems, Introduction to Statistics, and Data Structures & Algorithms gave me a strong foundation in structuring queries, detecting anomalies, and working with data at scale, which I applied directly in both roles.

---

**Question 2.** Developing or Enhancing a Reporting/Analytics Solution At Hunter Industries, I identified a gap where data available on a secondary internal platform was not accessible through the primary web application. I evaluated the existing data architecture to understand the inconsistency, then defined both the business need — users required unified access to that information — and the technical requirements for an Angular component that would bridge the two systems. I developed the component, integrated it into the existing codebase, and built a suite of tests to validate accuracy, security, and user experience against company standards. The solution has been in active use since December 2023. At the CSUSM Library, I similarly defined the requirements for a metadata processing tool, built it in C++ and Python, and integrated it with Excel. The goal was to produce reliable, accurate outputs that replaced a fully manual review process — so correctness and testability were central to the design from the start.

---

**Question 3.** Reviewing Vendor/Contractor Reporting Against Requirements In my Resource Specialist role at the City of Oceanside, I collaborate with external agencies and contractors to deliver programs within the region, which requires reviewing reported outcomes against program expectations and contractual commitments. This includes managing internship participants and computing programs where deliverables and participation metrics must be tracked and validated. When gaps or inconsistencies arise between what is reported and what is observed in practice, I document findings and work directly with the relevant parties to address and resolve them in a structured way. My experience analyzing survey and participation data at the CSUSM LatinX Center also required critically evaluating submitted and collected data for completeness and accuracy before presenting results to leadership — a process that involved flagging issues, going back to source data, and ensuring the final reported numbers were defensible. My statistics and discrete mathematics training reinforced a systematic approach to detecting anomalies and communicating findings clearly.
